

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.5 billion to 0.7 billion (United Nations 2002).

There are a number of reasons why the world population is ageing. First, the number of people who are aged 65 and over has increased because of the increase in life expectancy. In 1990, the life expectancy at birth was 47 years for males and 51 years for females. By 2000, the life expectancy at birth had increased to 52 years for males and 56 years for females (United Nations 2002). Second, the number of people who are aged 65 and over has increased because of the increase in the number of people who are aged 15 and over. In 1990, the number of people aged 15 and over was 1.1 billion. By 2000, the number of people aged 15 and over had increased to 1.5 billion (United Nations 2002).
